Functional Principle

An important feature of Wedge Lock Washers, setting them apart from other systems that are available, is the securing of the bolt fastening using preload force rather than friction

Wedge-shaped cams on the inside of the lock washers, radial teeth on the outside Interlocking embedding of the radial teeth with the respective mating surface (when tightening the bolted joint)

System movement only possible between the inner wedge shaped cams. Movement across these wedge shaped surfaces effectively self locks the bolt Increase in clamping force

SCREWS FOR TIMBER SELECTION GUIDE

SCREW POINTS INFORMATION

TYPE AB

This point is found on Type AB self tapping screws and a range of screws used for fastening timber or timber based building products. Its purpose is to assist the screw in engaging in the material being fastened.

LEAD POINT

This point is found on self tapping screws and a range of other screws used for fastening in a situation where the pilot hole cannot be easily located. The Lead point self located the screw into the pilot hole for fastening.

TYPE B

This point is applied to self tapping screws and generally specified where the screw is being driven into a shallow hole. Type B points provide for more full threads to be engaged in the material being fastened.

TYPE 17

Similar to the Type AB point, except that the screw material has been cut away. This feature, some times called a shank shot provides the ability for the screw to self drill through thin metal and then drill into timber members of the structure.

TYPE 25

A point designed to cut through threads in plastic material. The presence of the shank slot provides the cutting ability and also for the clearance of cutting chips.

TYPE 23

Fasteners with this cutting thread point are designed for use in soft metals or die castings. Threads produced belong to the machine thread series.

WINGED DRILL

In thicker building materials such as plywood, hardboard or cement sheet, the addition of wings cuts a slightly oversize hole permitting clear passage of the thread to engage with supporting steel structural members.

DRILL

A point designed to fasten material of varying types to steel. The shape of the drill point gives the fastener the ability to drill its own hole in most materials including steel.

ROOF X FAST

SCREWS

SUPERIOR DRILLING PERFORMANCE

Dual point screw - suitable for drilling into all timber applications and steel up to 3mm thick

Mechanical Properties to AS3566.1 2002

Top-grip thread for superior holding power

Packed in plastic free cardboard boxes of 500

Premium mechanical galvanised coating suitable for use in ISO 9223 Environmental Categories (Class 5)

Available in a range of coloured heads to match NZ Colorsteel colours

6mm diameter - available in 3 lengths 35, 55 and 65mm

Quality DEKS Neoprene Sealing Washer

Available from Steel & Tube Roofing and Fortress Fasteners

RAWLPLUG

R-KEM II WITH THREADED RODS FOR CONCRETE

UNIVERSAL POLYESTER RESIN (STYRENE FREE)

FEATURES AND BENEFITS

- Approved for use in non-cracked concrete (EAD 330499-01-0601), working life up to 100 years
- The most convenient bonded anchor for general purpose use
- Quick, secure and simple installation
- Product with wide spectrum of use in the medium load capacity area
- Ideal for applications where mechanical anchors are not suitable
- Easy dosage thanks to patented self-opening system and use of manual or electric gun
- Option of use standard manual silicone gun
- Winter version not available

APPLICATIONS

- Consoles
- Staircases
- Gates
- High racking
- Canopies
- Sanitary appliances
- Steel constructions
- Railings
- Handrails
- Ladders
- Cable trays

BASE MATERIALS

Approved for use in:

- Non-cracked concrete C20/25-C50/60

Also suitable for use in:

- Natural Stone (after site testing)

APPROVALS AND REPORTS

ETA-21/0243 and UKTA-22/6131
European Approval for 15 substrates

RAWLPLUG

R-KER-II HYBRID RESIN WITH THREADED RODS

UNIVERSAL POLYESTER RESIN (STYRENE FREE)

FEATURES AND BENEFITS

- Approved for use in cracked and non-cracked concrete (EAD 330499-01-0601), working life up to 100 years
- Suitable for use in dry or wet substrates and water filled holes
- For faster curing winter version of the resin can be used
- No need for hole cleaning when using Dustless drill bit
- Special nozzle with longer mixer for more comfortable and precise application
- Suitable for multiple use. Partly used product can be reused after fitting new nozzle
- Very high load capacity
- Tests in fire conditions confirm the fire resistance up to R120

APPLICATIONS

- Curtain walling
- Balustrading
- Handrails
- Canopies
- Cable conduits and trays
- Fencing & gates manufacturing and installation
- Pipework/ductwork supports
- Platforms
- Pipelines systems
- Passenger lifts
- Safety barriers
- Formwork support systems
- Structural steelwork
- Street lamps
- Racking systems
- Barriers

R-KEX II WITH REBARS AS AN ANCHOR

PREMIUM PURE EPOXY RESIN APPROVED FOR USE WITH REINFORCEMENT BARS

FEATURES AND BENEFITS

- The strongest resin in the epoxy resin class
- Approved for use in cracked and non-cracked concrete (EAD 330499-01-0601), working life up to 100 years
- Suitable for use in dry and wet substrates including flooded holes (use category II & I2)
- Diamond and hammer drilling
- Seismic category C1, C2
- Very high chemical resistance – suitable for applications exposed to influence of various agents (industrial or marine environment)
- Minimal shrinkage provides option of use in diamond-drilled holes and oversized holes
- Extended working time ensures easy installation of metal components (up to 30 min. in 20°C)
- For use in positive temperatures

APPLICATIONS

- Safety barriers
- Temporary works/ formworks support systems
- Rebar
- Curtain walling
- Formwork support systems
- Masonry support
- Platforms
- Structural steelwork
- Rebar dowelling
- Starter bars
- Rebar missed-outs

BASE MATERIALS

Approved for use in:

- Non-cracked concrete C20/25-C50/60
- Cracked concrete C20/25-C50/60

Also suitable for use in:

INSTALLATION GUIDE

1. Drill hole to the required diameter and depth for stud size being used.
2. Solid substrates: clean the drill hole thoroughly with brush and hand pump at least four times before installation.
3. Insert cartridge into gun and attach nozzle.
4. Dispense to waste until even colour is obtained.
5. Insert the mixer nozzle to the bottom of the drill hole and inject resin, slowly withdrawing the nozzle as the hole is filled to 70% of its depth.
6. Immediately insert the stud, slowly and with slight twisting motion. Remove any excess resin around the hole before it sets and leave it undisturbed until the curing time elapses.
7. Attach fixture and tighten the nut to the required torque.
