

Steel & Tube and RoofLogic, bringing together leading commercial warm roof solutions and high performing roofing profiles

Delivering strength, reliability and performance. Engineered warm roof systems are rigorously tested and engineered to provide project specific solutions tailored to your design needs

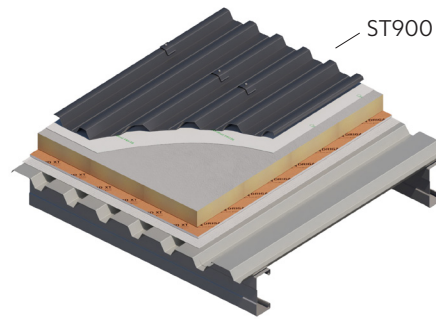

ROOFLOGIC FIBERTHERMX SYSTEM

The high performance aluminium FiberthermX system is a proven commercial roofing solution that provides a range of important advantages in terms of design, performance and construction.

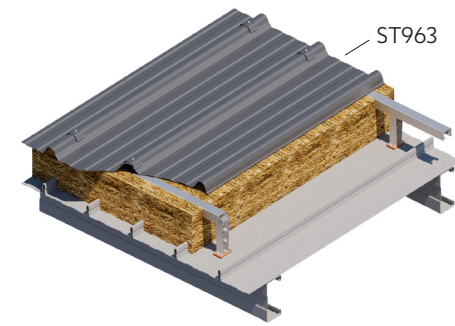

Engineered to meet wind (positive and negative), snow, and seismic design loads (SLS and ULS), FiberthermX is the culmination of 10 years of Research & Development.

At the heart of the FiberthermX system is the structural post and rail assembly that is used to separate the outer skin from the internal liner decks.

ROOFLOGIC ULTRATHERM MSR

Utilises rigid insulation layers to provide thermal, acoustic and structural performance to meet the precise project requirements. Ultratherm MSR system can be installed over RoofLogic's engineered structural liner, standard plywood or CLT.

OVERLAY SOLUTIONS

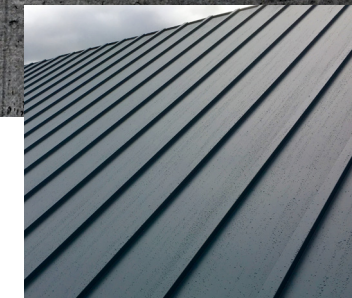

FiberthermX, and Ultratherm MSR are available as Recover Systems. RoofLogic provides a suite of re-roofing solutions that allows the refreshing of existing roof assemblies.

RoofLogic designs and engineers Recover systems to provide long-term durability, weathertightness, and enhanced thermal and acoustic performance. The simplification of the re-roofing process with a fully warranted system solution has made Recover our most popular system.

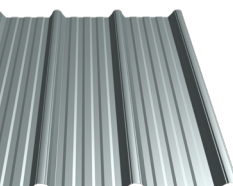

ENGINEERED TO LAST DESIGNED TO PERFORM

Engineered for performance, Steel & Tube roofing profiles work in harmony with RoofLogic system solutions to create robust, end-to-end roofing systems. Every element is designed to fit, function and last, providing superior weather protection, structural integrity, and ease of installation for projects of any scale.

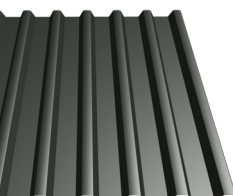

TRAPEZOIDAL SOLUTIONS: ST963®, ST900® and ST7®

We have a range of commercial grade trapezoidal solutions that can be partnered with RoofLogic's MSR solutions to bring noticeable cost and performance benefits across a wide range of projects.

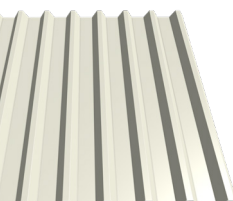

ST963®

- 963mm Effective cover, maximising material efficiency and maintaining cost savings on large-scale commercial projects.
- Fast installation with the ability to have large spans
- Roll formed in Auckland and Christchurch.

ST900®

- 900mm Effective cover
- Popular commercial profile that performs well in all wind zones
- Roll formed in Auckland and Christchurch.

ST7®

- 889mm Effective cover
- A high-performing profile offering strong aesthetics and a streamlined appearance, achieved through tight, centred rib spacing for enhanced visual appeal.
- Roll formed in Wellington.

COST-EFFECTIVE ARCHITECTURAL TRAY PROFILE: QBT450™

QBT450™ can be partnered with RoofLogic's systems to deliver a high end architectural finish. QBT450™ has many performance benefits from increased wind performance and cost effective installations which enable a high end finish without blowing the budget.

QBT450™

- 462mm Effective cover
- This innovative system combines the timeless elegance of tray profile roofing with modern features that make it self-supporting and easier to install
- Quick and easy installation with low maintenance, reducing time and costs
- Roll formed in Auckland and Christchurch.
